DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 2, and 5, drawn to a method for sterilizing an object, classified in class 422, subclass 31.
 - II. Claims 3 and 4, drawn to a sterilizing apparatus, classified in class 422, subclass 292.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another and materially different apparatus. More specifically, the method may be used by an apparatus that does not require an aqueous solution of peracetic acid and hydrogen peroxide at the cathode.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required

Art Unit: 1744

because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. During a telephone conversation with Mr. Mark Boland on January 17, 2007 a provisional election was made without traverse to prosecute the invention of Group I, claims 1, 2, and 5. Affirmation of this election must be made by applicant in replying to this Office action. Claims 3 and 4 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Merk et al. (U.S. Patent No. 6,387,238).

Merk discloses a method for the sterilizing/cleaning of an object with an aqueous solution of a peroxide, which comprises sterilizing/cleaning the object with an aqueous solution containing a peracetic acid electrolytically synthesized from acetic acid and/or acetate (column 1, lines 30-35) and an oxygen-containing gas as starting materials (column 3, lines 19-25). Concerning claim 2, Merk also discloses that the aqueous solution of a peroxide used for the sterilizing/cleaning of the object is reused for electrolytic synthesis (column 12, lines 44-52).

8. Claim 5 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by Tennakoon et al. (U.S. Patent No. 6,949,178).

Tennakoon discloses a method for the electrolytic synthesis of peracetic acid which comprises electrolytically synthesizing peracetic acid from the acetic acid and/or acetate and an oxygen containing gas as starting materials in the presence of a solid acid catalyst in column 12, lines 19-47.
